# THE HALIGRIC YEARLY MEAL GUIDE

Volume II: Subtropical East Coast

*Brisbane · Sydney · Gold Coast · Nourishing Through the Humid Summer and the Mild Winter*

# The Subtropical East Coast Philosophy

The Subtropical East Coast Haligric Guide is designed for the distinct but moderate seasonal rhythms of the eastern seaboard — where winters are mild and rarely frosty, summers are warm to hot with high humidity from November through March, and spring and autumn offer the best growing conditions of the year. This guide aligns your body with what the coastal valleys and hinterlands are actually producing in each season: abundant tropical fruits and leafy greens in the warm months; root vegetables, brassicas, and citrus in the mild winter.

### The Calendar Decoder

Schedules are organized by date groups (e.g., **1/8/15/22** ). These represent the **Day of the Week** (e.g., every Monday). **Logic:** By repeating the same Trinity each Monday for a month, you establish a consistent rhythm that allows your body to align with the Subtropical East Coast's unique seasonal shifts at a cellular level.

## The Trinity Formula

Every day is a Trinity: **One Grain + One Green + One Protein** . On the Subtropical East Coast, we emphasize adaptable grains like brown rice and quinoa, seasonal greens including silverbeet, Asian leafy greens, and local brassicas, and clean proteins — tempeh, legumes, and seasonal pulses — to navigate the coast's humidity without taxing digestion.

**The Trinity: Quinoa (Grain) + Asparagus (Green) + White Beans (Protein)**

1. Cook Quinoa. 2. Trim asparagus; roast at 200C for 12 minutes until just tender. 3. Warm white beans with garlic and fresh thyme. 4. Assemble quinoa, asparagus, and beans. 5. Raw foods can be incorporated more freely during the peak heat months.*
